Subject: Re: Sonatype Lifecycle Grafana Export

You don't often get email from zcorbin@sonatype.com. Learn why this is important

Hey Joe,

Thanks for reaching out. Unfortunately you will have to convert the JSON into Prometheus yourself. Most customers using Grafana are looking to use it with NXRM but not LC which is why the feature was added a few years ago to NXRM.

I'll make sure to open a Feature Request for you to have this added to LC.

Please do not hesitate to reach out if you have any further questions!

Best,

ZACH CORBIN

We're setting up dashboards in Grafana and have been successful with Nexus Repository Manager, but not so much with Sonatype Lifecycle.

Sonabot had this to say on the matter:

Sonatype Lifecycle (IQ Server) and Nexus Repository handle Prometheus integration differently:
Nexus Repository has a **native Prometheus endpoint** that directly exports metrics in Prometheus format:

- /service/rest/metrics/prometheus (v3.81.0+)
- /service/metrics/prometheus (v3.19.0–3.80.0)

Prometheus docs

Metrics REST API
Sonatype Lifecycle (IQ Server) does **not** have a native Prometheus endpoint. Its metrics API returns data in **JSON format** only:
http://localhost:8071/metrics?pretty=true
The documentation explicitly notes that while Prometheus cannot natively consume this JSON output, integration is possible through the use of exporters (for example, json_exporter) that transform the JSON output into a Prometheus-compatible format.

Operational Menu
In summary: Nexus Repository supports Prometheus natively, while Lifecycle requires an intermediate exporter (like json_exporter) to bridge the JSON metrics output into a Prometheus-compatible format.

So, my question: do you guys have a pre-made setup for Sonatype Lifecycle that I can import into Grafana? Or are we stuck building out the exporters manually? I was hoping you or your support staff might have a neat little library of dashboards that can be exported/imported. Just thought I'd ask before going through the lengthy process of building this stuff out by hand.

Thanks!

Sincerely,
